
Coaster Documentation

Release 0.7.0

Hasgeek

May 29, 2023

Contents

1	Coaster documentation	1
1.1	Coaster types	1
1.2	Database session and instance	1
2	Indices and tables	3
	Python Module Index	5
	Index	7

Coaster contains functions and db models for recurring patterns in Flask apps. Coaster is available under the BSD license, the same license as Flask.

1.1 Coaster types

```
coaster.typing.ReturnDecorator = typing.Callable[[~WrappedFunc], ~WrappedFunc]
```

Return type for decorator factories

```
coaster.typing.WrappedFunc = ~WrappedFunc
```

Type used for functions and methods wrapped in a decorator

1.2 Database session and instance

Coaster provides an instance of Flask-SQLAlchemy. If your app has models distributed across modules, you can use coaster's instance instead of creating a new module solely for a shared dependency. Some Hasgeek libraries like [nodular](#) and [Flask-Commentease](#) depend on this instance for their models.

```
coaster.db.db
```

Instance of SQLAlchemy

Caution: This instance is process-global. Your database models will be shared across all apps running in the same process. Do not run unrelated apps in the same process.

CHAPTER 2

Indices and tables

- `genindex`
- `modindex`
- `search`

C

`coaster.db`, [1](#)
`coaster.typing`, [1](#)

C

`coaster.db` (*module*), 1
`coaster.typing` (*module*), 1

D

`db` (*in module coaster.db*), 1

R

`ReturnDecorator` (*in module coaster.typing*), 1

W

`WrappedFunc` (*in module coaster.typing*), 1
